

Ahmed Gaafar Kamal Musa

Full-Stack Developer

Alexandria, Egypt | ahmedjaafarbadri@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Summary

Full-stack developer who has independently architected, built, and deployed multiple production-grade SaaS platforms end-to-end — from database schema design to Dockerized deployment — across the MERN and PERN stacks. Comfortable owning a feature from API design through to a polished, responsive UI.

Experience

Full-Stack Web Developer Intern — MAIM Digital Solutions

Jul 2025 – Sep 2025

Alexandria, Egypt (Remote)

- Built backend services with Express.js and MongoDB, developing RESTful APIs following client-server best practices.
- Strengthened frontend skills using TypeScript, Tailwind CSS, and React.js; deployed full-stack apps to VPS environments.
- Developed a capstone project, *Eventx Studio*, a full-stack event booking platform for browsing, booking, and managing events.

Frontend Developer Intern — GMind

Jul 2024 – Sep 2024

Alexandria, Egypt (Remote)

- Built reusable UI components in React.js using component-based architecture; managed state with Redux, Redux Toolkit, and Redux Thunk.
- Collaborated on a team E-commerce application featuring product listing, cart management, and dynamic state updates.

Skills

Frontend: React.js, Next.js, TypeScript, Tailwind CSS, Zustand, Context API

Backend: Node.js, Express.js, REST API Design, JWT, OAuth 2.0, Zod

Databases: MongoDB, Mongoose, PostgreSQL, Prisma ORM

DevOps & Cloud: Docker, NGINX, PM2, GitHub Actions, AWS (Route 53, S3), Cloudflare

Other: Stripe, Cloudinary, Git/GitHub

Projects

Njerka AI — AI-Powered Health & Fitness SaaS Platform

React, Node.js, MongoDB, Docker

- Architected and shipped a full-stack platform end-to-end: React frontend (8+ feature modules), Express/MongoDB backend (40+ endpoints), Docker with NGINX deployment.
- Built dual authentication (JWT + Google OAuth 2.0) with role-based access control, plus a gamification system and social community features.
- Designed MongoDB schemas for complex nested entities and built a real-time analytics dashboard with AI-driven recommendations.
- Implemented a modular notification and activity-feed system, syncing user progress, achievements, and social interactions in real time.
- Optimized API response times through query indexing and payload restructuring, improving dashboard load performance under concurrent users.

DevPilot — Self-Hosted Deployment Platform (PaaS)

React, Node.js, Bash, AWS

- Built a self-hosted PaaS: React monitoring dashboard, Express backend for GitHub webhook-triggered CI/CD, Bash scripts for full server provisioning.
- Automated NGINX virtual hosts, SSL via Certbot, PM2, and DNS configuration, cutting new deployment setup to near-zero manual effort.
- Configured AWS Route 53 and Cloudflare for multi-tenant subdomain routing and SSL termination across simultaneous production apps.
- Designed a webhook listener and deployment queue to handle concurrent build triggers without conflicts across tenant apps.
- Built a live log-streaming view into the dashboard, giving real-time visibility into build, deploy, and rollback status.

Education

Bachelor of Computer & Data Science

Expected Graduation 2027 (4th Year)

Languages

Arabic (Native), English (Fluent)
